

Connect – the employee app

Connect is the **personal and location-independent** information channel. The employee app makes it easy to **stay up-to-date, to interact and to be part of the organization's culture**. Connect contains several smart and user-friendly built-in functions, which make it possible to **focus on messaging and content**, rather than managing the technology.

The built-in-functions Information Feed, Availability, Chat, Events, Targets and Project Status **enable successful internal communications**. Let's take a closer look!

Informationfeed

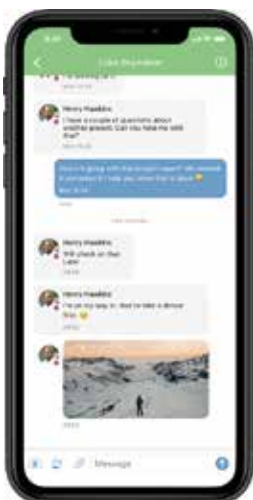

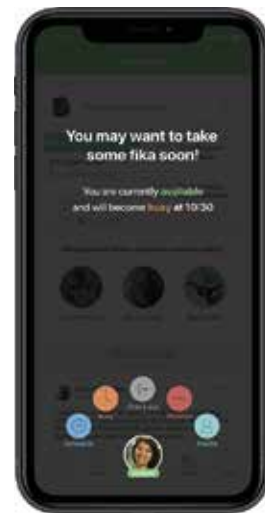

An information flow can be recurring news from management or a local workgroup. It is easy to create, update and set up where and for whom the information should be displayed.

The information feed can be updated both in PLAYipp Manager as well as in Connect. This is a quick way of reaching out to coworkers with informative updates and news.

Availability

The Availability function enables colleagues to easily see if someone is busy, available or not at work. Changing your availability is as easy as pressing a button and is updated instantly.

This way, the irritation of not knowing who is out sick, caring for a sick child or is out of office will disappear. The update will appear instantly both in the app and on the screens.

Chat

In the chat function, you can quickly communicate directly with your colleagues – send messages, images, movies or files.

If you want to reach more people, you can create groups and send the same information to everyone at the same time. The chat function helps you keep your email inbox less cluttered.

Events

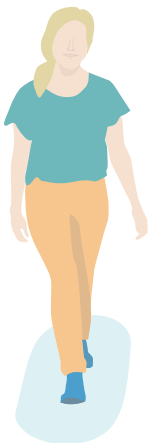

With Events you can easily create information that is communicated in a calendar format. It is an effective way to share information about events that happen on a specific date and time.

If you want to inform others about an event or meeting, just create a new event and it will be added to the events calendar.

Targets

Targets visualizes the status of set goals, such as budget goals and activity targets. The built-in function is easily updated and will show target figures both in the form of numbers and graphs.

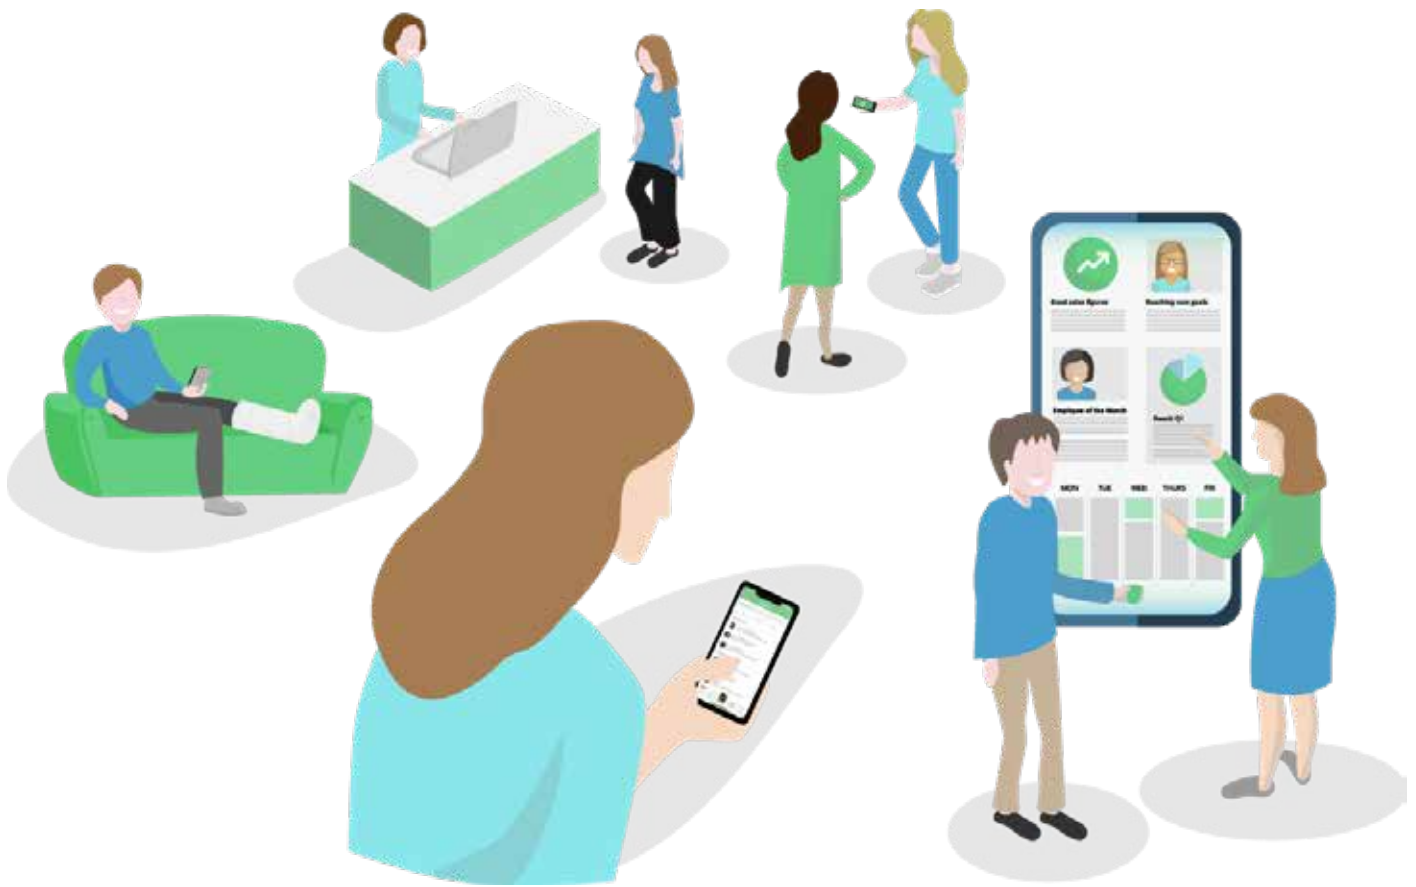

With Connect in the pocket of every coworker everyone can easily see past updates and get a compilation over time.

Project Status

Communicating updates about specific projects has never been easier with the Project status function. Every update helps your colleagues to keep track of project progress.

A summary chart gives an overview of the status of a project. Project status is indicated as a percentage and in the colors red, orange or green.

PLAYipp is a user friendly cloud-based platform that helps you **succeed with your internal communication**. It allows you to share information via **digital information screens** and directly on **the employeeapp Connect**.

Multiple editors can quickly and easily create and update content. The platform makes it possible to **share information, interact and create social networks** within the company and among employees.

A social intranet engages employees

In a social intranet, employees are actively involved - not only as consumers but also producers of information. This promotes participation, transparency and an increased sense of belonging.

In a conventional intranet can be likened to **an archive packed with news, documents and routines.**

Enabling two-way communication

- > The intranet is no longer just a bulletin board – it's a platform for communication.
- > Everyone can contribute, which increases the feeling of participation and belonging.
- > An individual's news flow is customized based on their organizational affiliation and team.
- > Information becomes more relevant and it is easier to receive important messages.
- > Employees are better informed, which increases commitment and productivity.

> Book an [unconditional meeting](#), where we can tell you more about the opportunities.
